Web Weavers

Did you know that spiders weave different kinds of web depending on how they catch their prey? We had a go at making orb webs, but some of them came out looking more like cobwebs!

To make our webs, we had to tie a slip knot, then use square lashing to tie the crossed sticks together. After that, we wove different coloured wool around the sticks to create our webs.

We had to help each other, because some of us got our webs in a bit of a tangle!

What do you think of our handiwork?

At Shalfleet we were catching up with making our creepy crawlies – the wind and the rain made it extra challenging, but we helped each other to make our bugs. What a great way to build our relationships!

We are always looking for ways to improve our recipes in the mud kitchen – sticks, grass, leaves and mud can all be made into appetizing creations.

Yummy!

There are so many things to investigate in our gardens and some of us just like to spend time looking for interesting things. We spotted some curious marks on the tree bark. what do you think made them? An insect, a small mammal or a bird?

Which webs will you spot when you're out and about?
